

User agreement for parcels using franking machine

This agreement regulates the provisions for the use of a franking machine as a form of settlement for products and services using EDI from Bring/Norway Post.

The solution is based on the customer itself calculating the postage for the consignment and paying using the currently valid software and franking machine.

The tariff is based on the actual weight (not volume calculation), see associated [price list](#).

All consignments are weighed and measured by Bring/Norway Post upon receipt. The measuring and weighing equipment is approved by the Norwegian Metrology Service. Dimensions and weight captured by Bring/Norway Post are used for invoicing.

In the event of discrepancies between paid postage and correct postage, Bring/Norway Post reserves the right to invoice outstanding accounts. The rules applicable at any time for [settlement](#) (invoicing/crediting/offset) may be found at [bring.no](#).

For other conditions and information, please refer to [bring.no/en/terms-and-conditions](#). If necessary, please contact Norway Post's customer service on 04045.
